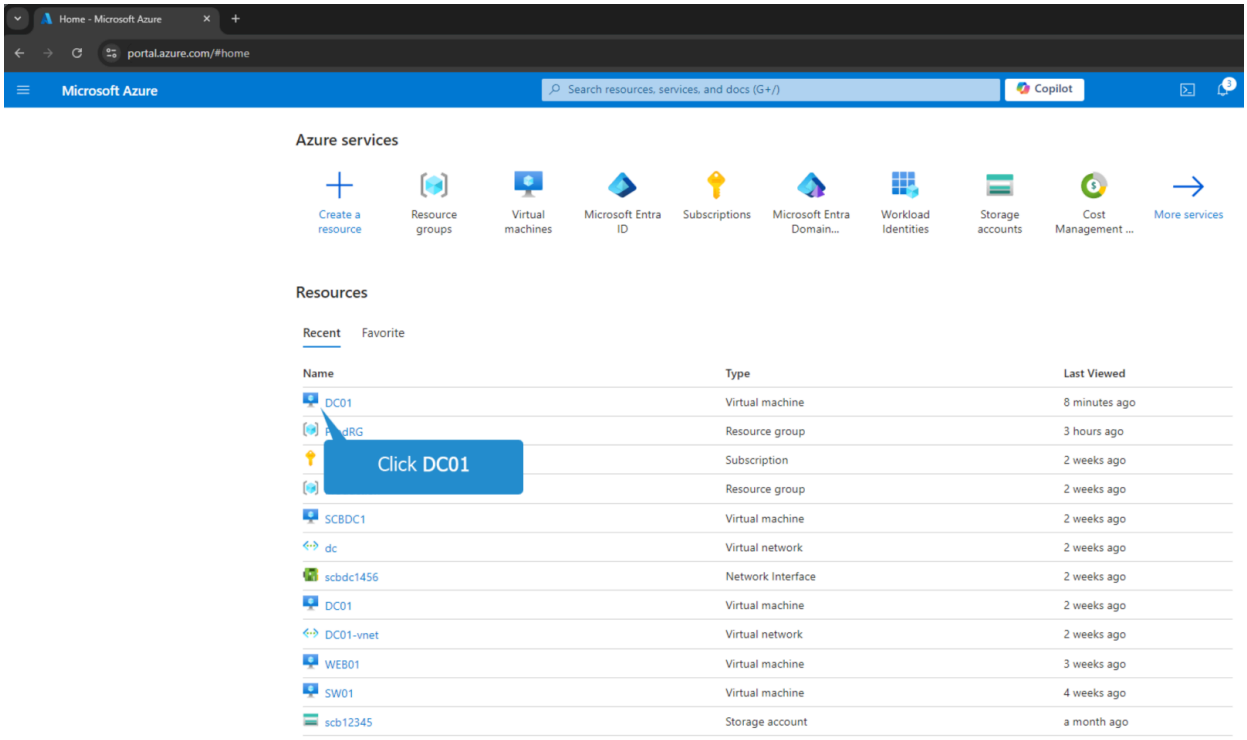
Add and Remove Resource Locks in Azure (SOP)

Add and remove resource locks in Azure to prevent accidental or unauthorized modifications to important resources.

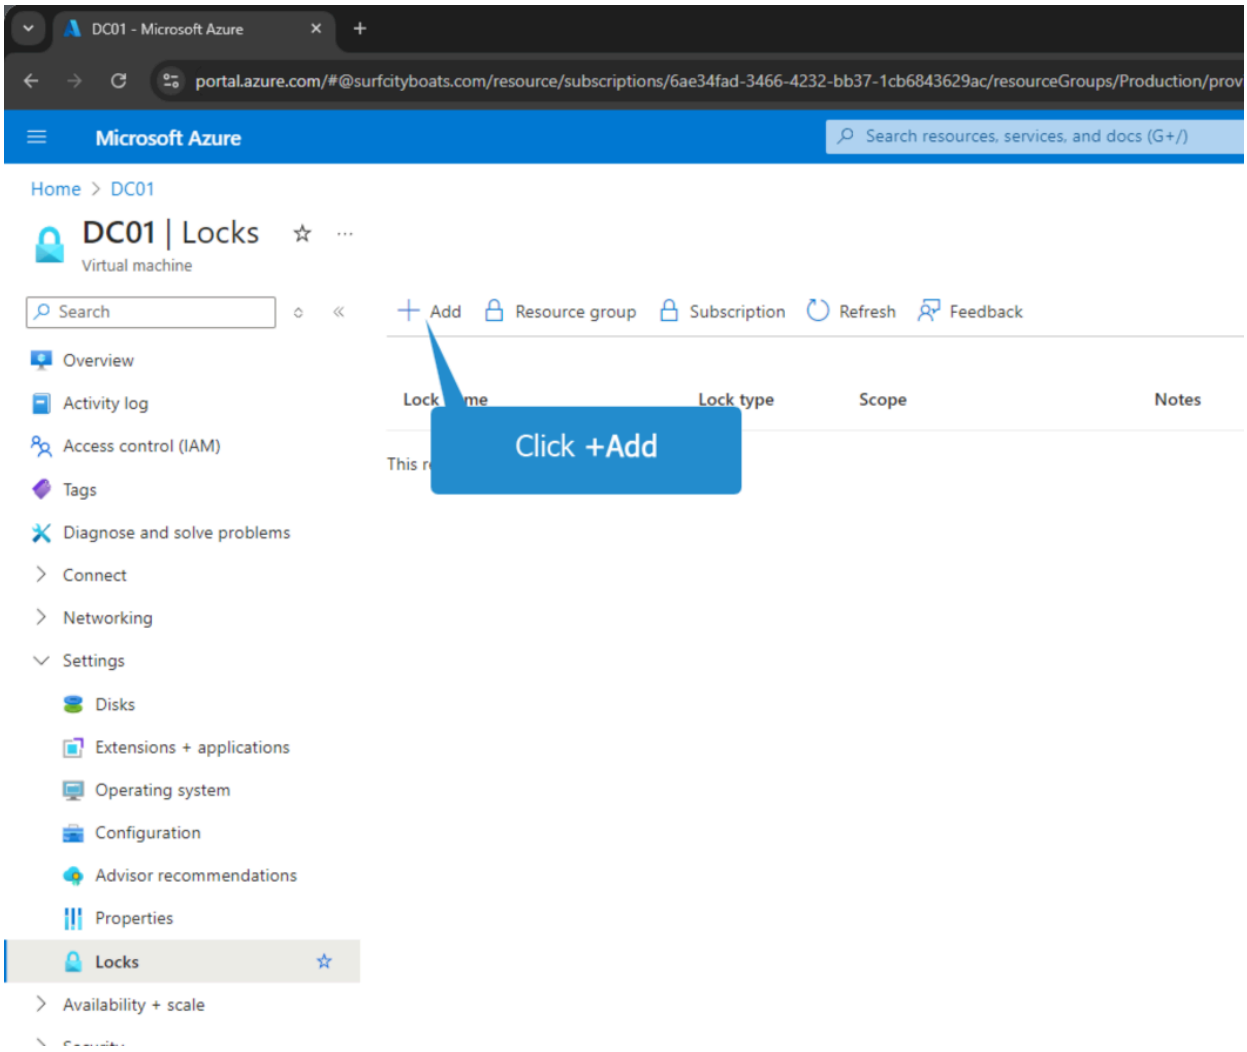
Locking resources protects the resource from being modified or deleted unintentionally.

Task: Apply a "Delete" lock to a virtual machine, then test the lock's effectiveness by trying to delete the resource, and finally remove the lock.

Apply a lock to the DC01 virtual machine



Create the lock



Select “Delete” because the resource lock blocks deletion
