

Create and Configure an NSG in Azure (SOP)

Task: create and configure a Network Security Group (NSG) within the Azure portal

- Network Security Groups in Azure help you control inbound and outbound network traffic to your resources.
- Set up inbound security rules in the NSG to define which traffic is allowed or denied based on factors such as the source, destination, and protocol
- Create a new NSG, define security rules, and associate the NSG with a specified subnet in a virtual network.
 - Apply specific security rules for HTTP traffic using an NSG.
 - Then verify the successful application of the NSG to a virtual network and its subnets

Information

- NSG Name: NSG-App in resource group ProdRG
- Inbound rule: HTTP
 - Source: Any
 - Destination: Any
- Associated Virtual Network: vNet-App
- Associated Subnet: apps

Network security group security rules are evaluated by priority using the combination of source, source port, destination, destination port, and protocol to allow or deny the traffic. A security rule can't have the same priority and direction as an existing rule. You can't delete default security rules, but you can override them with rules that have a higher priority. Microsoft Azure portal showing the "Add inbound security rule" dialog for NSG-App. The dialog is open, and the "Add" button is highlighted with a blue callout that says "Click Add".

The "Add inbound security rule" dialog shows the following configuration:

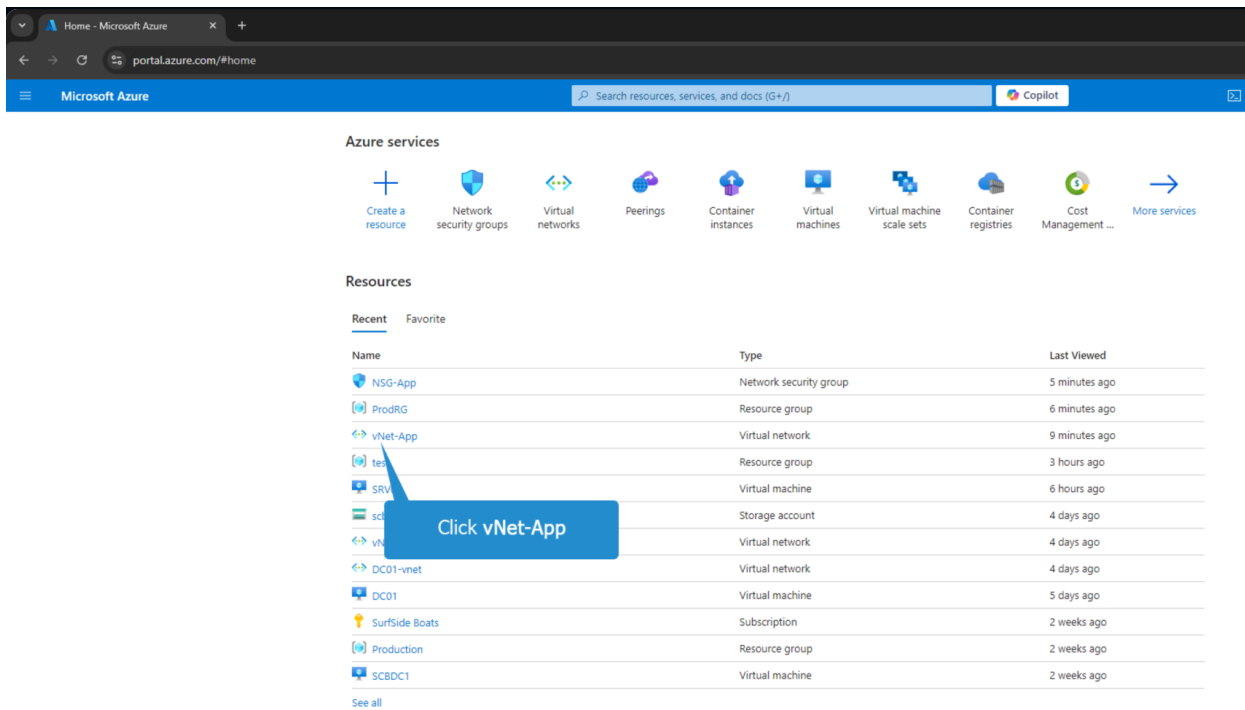

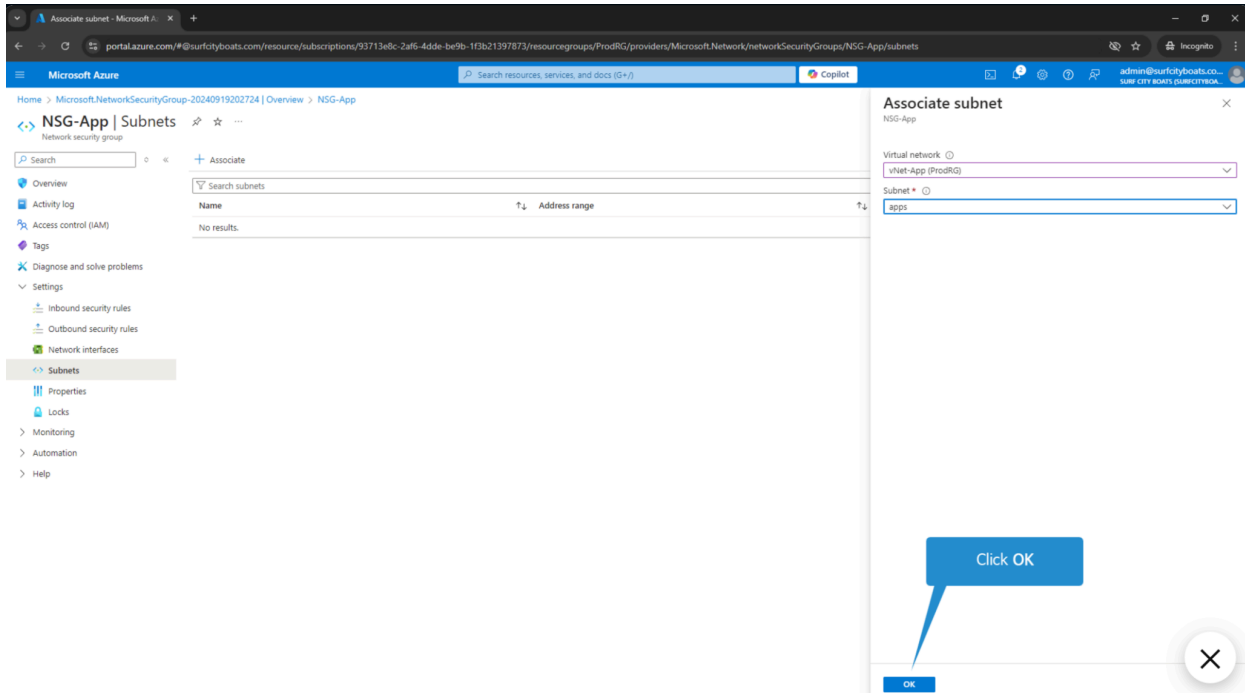

- Source: Any
- Source port ranges: *
- Destination: Any
- Service: HTTP
- Destination port ranges: 80
- Protocol: TCP
- Action: Allow
- Priority: 100
- Name: AllowAnyHTTPIPbound
- Description: (empty)

The "Add" button is highlighted with a blue callout that says "Click Add".

Microsoft Azure portal showing the "NSG-App | Inbound security rules" page. The "Subnets" link in the left-hand navigation pane is highlighted with a blue callout that says "Click Subnets".

The "NSG-App | Inbound security rules" page displays a table of security rules. The "Subnets" link in the left-hand navigation pane is highlighted with a blue callout that says "Click Subnets".

Microsoft Azure portal interface showing the "Edit subnet" configuration page for a virtual network named "vNet-App". The left sidebar displays the navigation menu with "Subnets" selected. The main content area shows the "Edit subnet" form with fields for Subnet ID, Subnet purpose, Name, IPv4 address space, and IPv6 address space. A blue callout box with the text "Click here to scroll down" points to the "IPv4" section. The "IPv4" section includes a checkbox for "Include an IPv4 address space" (checked), a "Starting address" field (192.168.1.0), a "Size" dropdown (/24 (256 addresses)), and a "Subnet address range" field (192.168.1.0 - 192.168.1.255). The "IPv6" section has a checkbox for "Include an IPv6 address space" (unchecked). The "Security" section includes a checkbox for "Enable private subnet (no default outbound access)" (checked), a "NAT gateway" dropdown (None), and a "Network security group" dropdown (NSG-App). The "Service Endpoints" section has a "Select a service endpoint" dropdown. The "Subnet Delegation" section has a "Delegate subnet to a service" dropdown (None). The "Network Policy for Private Endpoints" section has a "Private endpoint network policy" dropdown (Disabled). The bottom of the form has "Save" and "Cancel" buttons.

Microsoft Azure portal interface showing the "Edit subnet" configuration page for a virtual network named "vNet-App". The left sidebar displays the navigation menu with "Subnets" selected. The main content area shows the "Edit subnet" form with fields for Subnet ID, Subnet purpose, Name, IPv4 address space, and IPv6 address space. A blue callout box with the text "Click Overview" points to the "Overview" tab in the left sidebar. The "Overview" tab is selected, and the "Edit subnet" form is visible. The "IPv4" section includes a checkbox for "Include an IPv4 address space" (checked), a "Starting address" field (192.168.1.0), a "Size" dropdown (/24 (256 addresses)), and a "Subnet address range" field (192.168.1.0 - 192.168.1.255). The "IPv6" section has a checkbox for "Include an IPv6 address space" (unchecked).
