

Configure vNet Peering in Azure (SOP)

Task: create and configure Virtual Network (vNet) Peering in Azure to connect two virtual networks, enable low-latency, high-speed communication between them as if they're a single network.

- Set up bi-directional peering between two isolated virtual networks, ensure secure communication and resource access across the networks.
- Configure and name peering links to ensure proper management and tracking
- Verify the successful creation of vNet Peering in Azure portal

Information

- Source vNet: vNet-App
- Target vNet: vNet-Prod
- Peering link (App → Prod): prod-app
- Peering link (Prod → App): app-prod
- Connection type: Bi-directional

The screenshot shows the Microsoft Azure portal interface. At the top, there's a search bar and a 'Copilot' button. Below the header, the 'Azure services' section displays various icons for different services. The 'Virtual networks' icon is highlighted with a blue callout box that says 'Click Virtual networks'. Below this, the 'Resources' section shows a table of recent resources. The table has columns for 'Name', 'Type', and 'Last Viewed'. The resources listed include vNet-App, ProdRG, vmss01, scbregistry123, test, SRV01, scbstorage12345, vNet-Prod, DC01-vnet, DC01, SurfSide Boats, and Production.

Name	Type	Last Viewed
vNet-App	Virtual network	4 minutes ago
ProdRG	Resource group	20 minutes ago
vmss01	Virtual machine scale set	2 hours ago
scbregistry123	Container registry	2 hours ago
test	Resource group	2 hours ago
SRV01	Virtual machine	5 hours ago
scbstorage12345	Storage account	4 days ago
vNet-Prod	Virtual network	4 days ago
DC01-vnet	Virtual network	4 days ago
DC01	Virtual machine	5 days ago
SurfSide Boats	Subscription	2 weeks ago
Production	Resource group	2 weeks ago

Click Peering

Microsoft Azure

Home > Virtual networks > vNet-App | Peerings >

Add peering

vNet-App

Virtual network peering enables you to seamlessly connect two or more virtual networks in Azure. This will allow resources in either virtual network to directly connect and communicate with resources in the peered virtual network.
