

Deploy and Configure Azure Bastion (SOP)

Task: Manually deploy and configure Azure Bastion within a specific resource group to securely connect to a virtual machine in a virtual network without exposing the machine to the public internet in the Azure portal.

- Azure Bastion provides secure & seamless RDP/SSH connectivity to VMs directly from the Azure portal over SSL, without requiring a public IP address on the virtual machine.
 - Ensures that your VM remains protected from direct exposure to the internet.
- Deploy a Bastion service, configure it to work with an existing virtual network, and test your configuration by securely connecting to a virtual machine.

Information:

- Bastion Host Name: Bastion01 in resource group ProdRG
- Tier: Standard
- Virtual Network: vNet-Prod
- Target VM: SRV01 (no public IP)
- Connection type: RDP by Bastion

View the current configuration of the SRV01 virtual machine

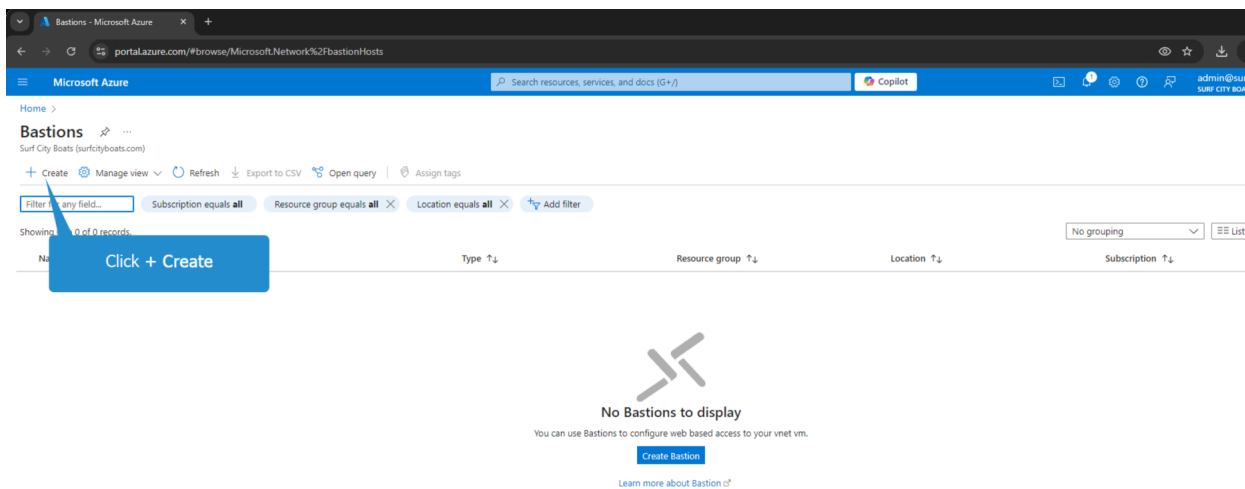

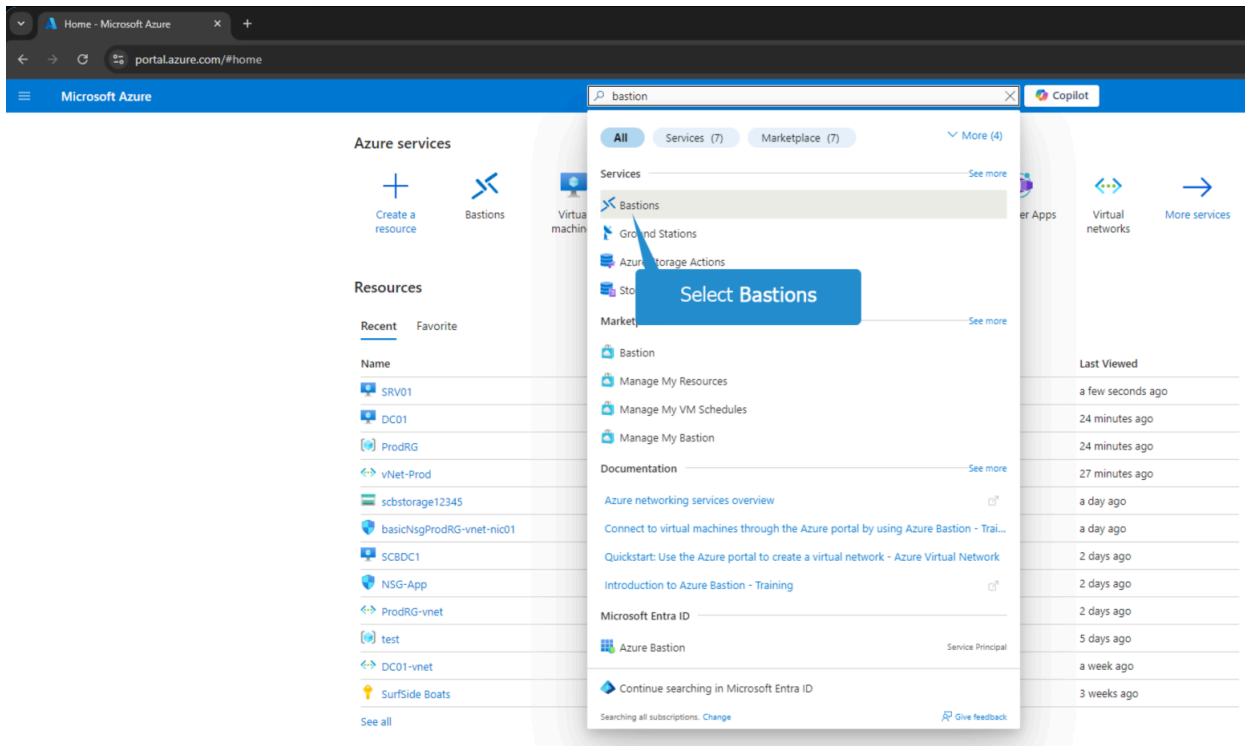

The screenshot shows the Microsoft Azure portal interface. At the top, there's a navigation bar with the 'Microsoft Azure' logo and a search bar. Below this, there's a section for 'Azure services' with various icons for different services like Bastions, Virtual machines, Resource groups, etc. The main part of the screen displays a 'Resources' table with columns for 'Name', 'Type', and 'Last Viewed'. The table lists several resources, including SRV01, DC01, ProdRG, vNet-Prod, and others. A blue callout box with the text 'Click SRV01' points to the SRV01 entry in the table. At the bottom, there's a 'Navigate' section with icons for Subscriptions, Resource groups, All resources, and Dashboard.

Name	Type	Last Viewed
SRV01	Virtual machine	11 minutes ago
DC01	Virtual machine	23 minutes ago
ProdRG	Resource group	24 minutes ago
vNet-Prod	Virtual network	26 minutes ago
storageaccount1	Storage account	a day ago
basicVagProdRG-vnet-nic01	Network security group	a day ago
SCBDC1	Virtual machine	2 days ago
NSG-App	Network security group	2 days ago
ProdRG-vnet	Virtual network	2 days ago
test	Resource group	5 days ago
DC01-vnet	Virtual network	a week ago
SurfSide Boats	Subscription	3 weeks ago

The screenshot displays the Azure portal interface for a virtual machine (VM) named SRV01. The left sidebar contains a navigation menu with categories like Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Connect, Networking, Settings, and Monitoring. The main content area is divided into several sections: Essentials, Properties, and Networking. The Essentials section shows basic information about the VM, including its resource group (ProdRG), status (Running), location (East US), subscription (Surf City Boats), and subscription ID. The Properties section provides detailed specifications for the virtual machine, such as its computer name (SRV01), operating system (Windows Server 2019 Datacenter), VM generation (V2), VM architecture (x64), agent status (Ready), agent version (2.7.41491.1139), hibernation (Disabled), host group, host, proximity placement group, colocation status (N/A), capacity reservation group, and disk controller type (SCSI). The Networking section lists the public IP address, public IP address (IPv6), private IP address (10.0.0.4), private IP address (IPv6), virtual network/subnet (vNet-Prod/default), and DNS name. The Size section shows the VM's size (Standard D2s v3), vCPUs (2), and RAM (8 GiB). The Source image details section lists the source image publisher (MicrosoftWindowsServer), source image offer (WindowsServer), and source image plan (2019-datacenter-gensecond).

Open the bastion service inside Azure

The screenshot shows the Azure portal's search results for the term "bastion". A search bar at the top contains the text "bastion". Below the search bar, a dropdown menu displays the search results, categorized into Services, Resources, Marketplace, Documentation, and Microsoft Entra ID. The Services section lists "Azure Bastion" and "Azure Maps Creator Resources". The Resources section lists "basicNsgProdRG-vnet-nic01". The Marketplace section lists "Language service", "CentOS-based", "Bastion", and "Manage My Resources". The Documentation section lists several articles related to Microsoft SQL Server vulnerability assessments. The Microsoft Entra ID section lists "Azure Bastion". A blue callout box with the text "Type bastion and press Enter" points to the search bar. The background shows the Azure portal's home page with a list of recent resources, including SRV01, DC01, ProdRG, vNet-Prod, scbstorage12345, basicNsgProdRG-vnet-nic01, SCBDC1, NSG-App, ProdRG-vnet, test, DC01-vnet, and SurfSide Boats.
